Learning Together Online

Resource Guide

About Vincent Giuliano

I believe a technique called Intentional Reality Creation has been at the heart of most basic personal and professional successes I have enjoyed in my long life. That is what I expect our forthcoming online conversation to be about. I am a longevity science researcher.

My blog www.agingsciences.com is visited daily by more than 3,500 people, has over 65,000 registered subscribers, and I estimate is followed by over 200,000 people worldwide. Here is the short bio on my website:

“Being a follower, connoisseur, and interpreter of longevity research is my latest career. I have been at this part-time for well over a decade, and in 2007 this became my mainline activity. In earlier reincarnations of my career. I was founding Dean of a graduate school and a University Professor at the State University of New York, a senior consultant working in a variety of fields at Arthur D. Little, Inc., Chief Scientist and COO of Mirror Systems, a software company, and an international Internet consultant. I got off the ground with one of the earliest PhD's from Harvard in a field later to become known as computer science. Because there was no academic field of computer science at the time, to get through I had to qualify myself in hard sciences,

Vince Giuliano

About Vince Giuliano Ctd

so my studies focused heavily on quantum physics. In various ways I contributed to the Computer Revolution starting in the 1950s and the Internet Revolution starting in the late 1980s. I am now engaged in doing the same for The Longevity Revolution.

I have published something like 200 books and papers as well as over 450 substantive entries in my blog, and have enjoyed various periods of notoriety. If you do a Google search on Vincent E. Giuliano, most if not all of the entries on the first several pages that come up will be ones relating to me.

Event Details

A high-level overview of what current science tells us.

A few of the questions addressed:

- What happens with ageing that leads us so surely to die?
- Will recent scientific "breakthroughs" allow me to live much longer or healthier? Or, what else might accomplish that goal?
- What do I have to do to help me or a loved one take advantage of what's known to live longer and healthier?
- How many expected really good and productive years can I add given what's known?
- What about longevity breakthroughs I read about in the newspapers?
- What about new or fad approaches?

You name them and I will react. Lots of informative slides. Addressed to the intelligent layperson.

Presentation Slides

Vincent has very kindly offered to share his PowerPoint presentation so you can go over the details again.
